

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently amended) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to a display request received from a receiving terminal, wherein the new Web page is optimized according to capability of the receiving terminal, traffic on a network or load on a server, and wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through a network.

2. (Original) A method for providing a Web page according to claim 1, wherein the standard format Web page is used to display a quotation amount for a product by making a quotation calculation on the receiving terminal, and the necessary data is data including product information needed for said quotation calculation.

3. (Previously presented) A method for providing a Web page from a server on a server side of a network to a receiving terminal on a receiving side of the network, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to a capability of a receiving side, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through a network.

4. (Previously presented) A method for providing a Web page according to claim 3, wherein the server is informed by the user of the capability of the receiving side.

5. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to a display format at the receiving terminal, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through a network.

6. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to traffic on a network, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through the network.

7. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to a selection condition corresponding to a capability of a network, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through the network.

8. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data needed to operate the display control program added to a standard format Web page that is prepared beforehand, said display control program having been selected according to a selection condition corresponding to a load on a server, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through a network.

9. (Previously presented) A method for providing a Web page to a receiving terminal on a receiving side of a network, the method comprising:

generating a new Web page that has a display control program and data that is needed to operate the display control program added to a standard format Web page that is prepared beforehand to display a quotation amount for a product, said display control program having been selected according to a display request received from the receiving terminal and a capability of the receiving side, said data including product information for calculating the quotation amount, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through the network.

10. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data that is needed to operate the display control program added to a standard format Web page that is prepared beforehand to display a quotation amount for a product, said display control program having been selected according to a display request

received from the receiving terminal and a display format of the receiving terminal, said data including product information for calculating the quotation amount, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new page to the receiving terminal through a network.

11. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data that is needed to operate the display control program added to a standard format Web page that is prepared beforehand to display a quotation amount for a product, said display control program having been selected according to a display request received from the receiving terminal and traffic on a network, said data including product information for calculating the quotation amount, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new Web page to the receiving terminal through the network.

12. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data that is needed to operate the display control program added to a standard format Web page that is prepared beforehand to display a quotation amount for a product, said display control program having been selected according to a display request received from the receiving terminal and a capability of a network, said data including product information for calculating the quotation amount, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new page to the receiving terminal through the network.

13. (Previously presented) A method for providing a Web page to a receiving terminal, the method comprising:

generating a new Web page that has a display control program and data that is needed to operate the display control program added to a standard format Web page that is prepared beforehand to display a quotation amount for a product, said display control program having been selected according to a display request received from the receiving terminal and a load on a server, said data including product information for calculating the quotation amount, wherein calculations performed in the display control program are performed by the receiving terminal; and

transmitting the new page to the receiving terminal through the network.

14. (Currently amended) A system for providing a Web page to a receiving terminal, the system comprising:

Web page generation apparatus operable to select a display control program and data needed to operate the display control program according to a predetermined condition from a database, and to add the display control program and the data needed to operate the display control program to a standard format Web page that is prepared beforehand to generate a new Web page, wherein the new Web page is optimized according to capability of the receiving terminal, traffic on a network or load on a server, and wherein calculations performed in the display control program are performed by the receiving terminal; and

communication apparatus operable to transmit the new Web page through a network to the receiving terminal.

15. (Currently amended) A computer readable storage medium with a program stored therein, the program operable to execute:

a process of selecting a display control program and data needed to operate the display control program according to a predetermined condition from a database;

a process of adding the display control program and data needed to operate the display control program to a standard format Web page that is prepared beforehand to generate a new Web page, wherein the new Web page is optimized according to capability of the receiving terminal, traffic on a network or load on a server, and wherein calculations performed in the display control program are performed by the receiving terminal; and

a process of transmitting the new Web page through a network to a receiving terminal.
